PROFESSIONAL SUMMARY

Hello my name is miracle joseph
cybersecurity professional with hands-on experience performing web application and API penetration testing in authorized laboratory environments, including OWASP Juice Shop and VulnBank. Experienced in reconnaissance, endpoint enumeration, authentication and authorization testing, JWT analysis, API security assessments, and validating vulnerabilities aligned with the OWASP Top 10. Proficient with Kali Linux, Burp Suite, Nmap, FFUF, Docker, and cURL. Passionate about offensive security, continuous learning, and producing clear technical documentation and remediation recommendations.

TECHNICAL SKILLS

Penetration Testing: Web Application & API Security Testing, Authentication & Authorization Testing, JWT Security Analysis, Session Management Testing, Reconnaissance, Directory & API Enumeration, HTTP Request Manipulation, Vulnerability Assessment & Reporting

OWASP Top 10: SQL Injection, Cross-Site Scripting (Stored, Reflected, DOM), Broken Authentication, Broken Access Control, IDOR, Security Misconfiguration, File Upload Vulnerabilities, Information Disclosure, Business Logic Testing, Client-Side Security, Cryptographic Weaknesses

Tools: Kali Linux, Burp Suite (Community Edition), Docker, Nmap, FFUF, Gobuster, cURL, WhatWeb, jq, Git, GitHub, Firefox Developer Tools

Networking: TCP/IP, HTTP/HTTPS, REST APIs, DNS, Ports & Services

Programming: Python, JavaScript, SQL, HTML, CSS

HANDS-ON PENETRATION TESTING EXPERIENCE

Web Application & API Penetration Test — VulnBank (Authorized Training Lab)

Performed a comprehensive penetration test against the intentionally vulnerable VulnBank application to identify and validate common web application security weaknesses.

Conducted reconnaissance and technology fingerprinting, plus port and service enumeration

Performed directory discovery using FFUF and API endpoint enumeration

Carried out authentication, session, and JWT token analysis

Assessed authorization and access control, including admin panel discovery and user enumeration

Manipulated HTTP requests using Burp Suite and cURL to validate multiple OWASP Top 10 vulnerabilities

Documented all findings with proof-of-concept evidence

Tools: Kali Linux, Burp Suite Community Edition, FFUF, Nmap, cURL, jq, WhatWeb

Repository:

github.com/MIRACLE773/vulnbank-pentest

Web Application Security Assessment — OWASP Juice Shop (Authorized Training Lab)

Conducted a complete security assessment of the OWASP Juice Shop application using manual penetration testing methodologies.

Performed reconnaissance and technology fingerprinting alongside API endpoint enumeration

Tested for SQL Injection, Broken Authentication, Broken Access Control, and IDOR

Conducted JWT security analysis and tested for Stored, Reflected, and DOM-based XSS

Tested file upload handling, business logic flows, and security misconfigurations

Manipulated HTTP requests to validate and document vulnerabilities

Tools: Burp Suite Community Edition, Kali Linux, Docker, Nmap, FFUF, Gobuster, cURL, jq, GitHub

Repository: github.com/MIRACLE773/juice-shop-pentest

PROJECTS

Web Application & API Security Portfolio

Built and documented practical penetration testing projects focused on identifying and validating web application vulnerabilities in controlled laboratory environments.

API Security and Authentication/Authorization Testing

JWT Security and Directory Enumeration

HTTP Request Manipulation and Vulnerability Validation

Technical Documentation of findings and methodology

GitHub: github.com/MIRACLE773

CORE COMPETENCIES

Web Application Security | API Penetration Testing | OWASP Top 10 | Security Assessment & Vulnerability Validation | Technical Documentation | Reconnaissance & Security Research | Problem Solving & Continuous Learning

ALX Africa

Cybersecurity Program

ALX Africa

Software Engineering Program

Certifications

ALX Cybersecurity Certificate
